PREFACE

In the context of the global energy transition, all sectors of the industry are actively promoting the development of "carbon neutral" technology. China's total industrial energy consumption accounts for about 70% of the country's total energy consumption, it is a long-term and arduous task to achieve carbon emission reduction in the industrial field.

Industrial production has a huge demand for high temperature hot water and has traditionally relied on fossil fuel technology. However, as technology advances, we are pleased to see that high temperature heat pump solutions are available for temperatures of 150 °C and below, and their application background is promising.

The high temperature heat pump technology is used to convert the medium and low temperature heat generated in the industrial production process into high temperature hot water or steam for industrial processing or heating. The promotion of this technology not only optimizes the energy structure, but also opens up a new way for enterprises to save energy and reduce emissions. At the same time, the solutions for high temperature heat pumps are also very diverse, such as air source circulation heat recovery, sensible heat exchanger heat recovery, injector switching analog bipolar heat recovery and overlapping bipolar compression, etc. , each has its own advantages and application scenarios.

Of course, it is undeniable that the high temperature heat pump is still in the early stage of development, and currently faces a series of challenges, in addition to system optimization and energy efficiency improvement, the lack of high-performance components also hinders its development. From the point of view of parts, the high temperature compressor bear the brunt, but the high temperature valve is also a major bottleneck, because most of the high temperature heat pump is a non-standard system, the valve on the market has a wide range of requirements. When different refrigerant is used, the exhaust temperature and condensing temperature are different, and a reasonable choice should be made according to the actual situation.

In this field, Sanhua Group actively responds to market demand, fully considers performance, efficiency and economy, and provides a series of high-temperature valve products.

At the same time, Sanhua will continue to be committed to the field of high temperature heat pump, constantly seek the highest temperature resistance breakthrough, and continue to develop new high temperature components, promote the healthy and rapid development of the industry, and contribute to the energy conservation and emission reduction of enterprises and green manufacturing.

Pressure Switch		high and low pressure controller PSV15	150°C	R515B, R245fa, R1233zd (E), R134a, R123	R515B, R245fa, R1233zd (E)	system high and low pressure	pressure protection	no relation with the system capacity	High lifetime, high accuracy, good adjustability MWP: 3.5MPa

DPF-TS/S03 Series

Electronic Expansion Valve

DPF-TS/S03 series electronic expansion valve is mainly used in the liquid pipeline position of high temperature heat pump system to realize the automatic adjustment of refrigerant flow, so that the system can operate under the best working conditions, and achieve rapid cooling or heating, accurate control and energy saving purposes.

FEATURES

- Adopting high temperature resistance nuts internally
- Smaller installation space: low height, small volume, light weight
- Optimized flow path design for noise reduction
- Fast operation, energy saving
- Two-way flow, applicable for reversible systems such as heat pump
- Compatible with Sanhua SEC series controller

GENERAL SPECIFICATIONS

- Applicable refrigerants: R515B, R245fa+ refrigeration oil and other HCFC, HFC, HC, HFO refrigerants
- Capacity range: 20~65KW@R515B
- Medium temperature: -60°C ~+120°C (duty cycle rate below 50%)
- Ambient temperature: -30°C ~+70°C (duty cycle rate below 50%)
- MWP: 4.5Mpa
- MOPD: 3.0Mpa
- 500 steps (full stroke); 32±20 opening pulse
- Certifications: UL&TUV and declaration according to LVD or PED
- Installation position:
 - Coil up, valve body rotor central axis perpendicular to the horizontal plane, deviation within 15°
 - Inlet connection preferably horizontal, outlet preferably downwards

ELECTRICAL PARAMETERS

- Rated voltage: 12V DC (±10%), rectangular wave
- Actuating mode: 4-phase 8-step permanent magnet stepping motor of direct-acting type
- Excitation mode: 1~2 phase excitation, unipolar actuation
- Excitation rate: 30 pps-40 pps
- Activation of self-holding mechanism: maintain excitation in stop position min. 0.1s~1.0sec.
- Min. Motion time from completely open to completely closed: 13s (40pps)
- Coil current: DPF (TS1)1.0-3.2, 260mA/phase (20°C) DPF (S03)4.0-7.5: 375mA/phase (20°C)
- Coil resistance: DPF (TS1)1.0-3.2, 46±3.7Ω/phase (20°C) DPF (S03)4.0-7.5: 32±3.2Ω/phase (20°C)
- Insulation class of coil: E
- Protection class: IP67

VPF Series

Electronic Expansion Valve

VPF series electronic expansion valves are designed for commercial and industrial applications, can be used in high temperature heat pump system. The valve controls the automatic adjustment of refrigerant flow rate and makes the system work under optimized conditions for the purpose of fast cooling or heating, precise temperature control and energy saving. The VPF flow curve is designed bi-directional, so that the flow rate can be accurately controlled under both cooling and heating conditions.

FEATURES

- Energy saving thanks to very precise capacity control: up to 3800 steps
- Compact design, smaller installation space
- With two-way cutoff function, internal tightness like a solenoid valve
- Applicable for reversible systems like heat pumps: bidirectional flow
- All stainless steel and corrosion resistance design, perfect sealing, long lifetime, higher reliability
- Without integrated sight glass

GENERAL SPECIFICATION

- Applicable refrigerants: R515B, R245fa+, R1233zd (E), refrigeration oil and other HCFC, HFC, HC, HFO refrigerants, cannot used for oil-free systems
- Capacity range: 30~985KW@R515B
- Full stroke:
 - 2600 steps: VPF12.5, VPF 25, VPF50
 - 3500 steps: VPF 100
 - 3800 steps: VPF 150, VPF250, VPF400
- Valve opening stroke:
 - 110 steps: VPF12.5, VPF25
 - 165 steps: VPF50~VPF400
- Medium temperature: -40°C /+130°C (VPF12.5-25); -40°C /+120°C (VPF50-400) (duty cycle rate below 50%)
- Ambient temperature: -40°C /+70°C (duty cycle rate below 50%)
- Max. Operating pressure: VPF12.5~VPF150: 5.0Mpa; VPF250~VPF400: 4.5Mpa
- Max. OPD: VPF12.5~VPF150: 3.5Mpa (forward and reverse); VPF250~VPF400: 3.5Mpa (unidirection)
- Installation position:
 - The main flow of refrigerant corresponds to the arrow
 - Installation in horizontal and vertical pipes possible
 - Installation position in horizontal lines with stepper motor preferably upwards
- Certifications: UL&TUV, declaration according to PED and EAC

VPF Series

Electronic Expansion Valve

ELECTRICAL PARAMETERS

- Actuating mode: 2-phase 4-step permanent magnet stepping motor
- Excitation mode: 2 phase excitation, bi-pole actuation
- Excitation rate: 300 pps (current drive)
- Motion time from completely open to completely closed (current drive): - VPF12.5~VPF50: 8.7s
- VPF100: 11.7s
- VPF150~400: 12.7s
- Motor rated current: 100mA RMS/phase (during normal control)
- Motor peak current: 140mA/phase (during reset operation)
- Coil resistance: $52 \pm 5.2\Omega$ /coil (20°C)
- Insulation class of coil: E
- Protection class: IP67

TECHNICAL PARAMETERS

Series	Connections Ød ODF		Valve Shape	Sight glass 1)	Kv 2)	Model 3)

CCV series

Magnetic Type of Check Valve

CCV series diaphragm check valve is used in high temperature heat pump system. It can be installed in high temperature and high pressure parts such as the compressor exhaust side, and can also be applied to the suction side of the compressor. The main function is to control the one-way flow of refrigerant and prevent reverse flow.

FEATURES

- Low pressure drops and low internal leakage
- Size 1/4" -3/4" are copper valve body, and size no less 7/8" are stainless steel valve body (with copper joints, welding protection is not required)
- Built-in filter
- All-metal design, strong refrigerant compatibility

GENERAL SPECIFICATION

- Applicable for R515B, R245fa, R1233zd (E) and all common HCFC, HFC, HFO refrigerants
- Medium temperature TS min. /max.: -40°C / +150°C
- Max. operating pressure PS: 4.9 MPa (49 bar)
- Installation position:
 - Flow direction corresponds to the arrow
 - CCV can be installed in any position and direction in the system
- Declaration according to PED

SBV Sereis

Ball Valve

SBV series ball valve is suitable for high temperature heat pump system liquid line where is before and after the filter, through the operation of the valve stem to open and cut off the internal flow path. It can also be used as service valve for vacuum pumping and refrigerant injection etc.

FEATURES

- Straightway type structure, the full port and necking valves are optional
- Valve body and valve seat with welding structure, with high product reliability
- Bi-directional flow
- Rotation stop ring assembly is built in the valve (no less than 1-1/8") for anti-rotation
- Special sealing materials to prevent internal leakage

GENERAL SPECIFICATION

- Applicable for R515B, R245fa and all common HCFC, HFC, HFO refrigerants
- Medium temperature TS min. /max.: -40°C / +120°C (+120°C - +150°C for short term use)
- Max. operating pressure PS: 4.9 MPa (49 bar)
- Installation position: liquid, suction and discharge line
- Certifications: UL/CUL and PED declaration

RBV-R Series

Ball Valve

The RBV-R series ball valve is suitable for the exhaust side of the high temperature heat pump or before and after the filter of liquid line, open and cut off the internal flow path by operating the valve stem. It can also be used as service valve for vacuum pumping and refrigerant injection etc.

FEATURES

- Straightway type structure, the full port and low pressure drop
- Valve body and valve seat with welding structure, with high product reliability
- Bi-directional flow
- Rotation stop ring assembly is built in the valve for anti-rotation
- Special sealing materials to prevent internal leakage

GENERAL SPECIFICATION

- Applicable for R515B, R245fa, R1233zd (E) and all common HCFC, HFC, HFO refrigerants
- Medium temperature TS min. /max.: -40°C / +160°C
- Max. operating pressure PS: 4.9 MPa (49 bar)
- Installation position: liquid, suction and discharge line
- The RBV-R series is without access fitting
- Certifications: UL/CUL and PED declaration

HDF/MDF Series Solenoid valve

This series solenoid valve is suitable for medium on-off control of high temperature heat pump system.

FEATURES

- Coil: Low power consumption and high reliability, and it's double sealed to reach IP67
- Special piston structure, and excellent anti-impurity ability
- Detachable structure for easy maintenance (Only HDF series)
- It can be used in oil circuit

GENERAL SPECIFICATION

- Applicable for R515B, R245fa, R1233zd (E) and all common HCFC, HFC, HFO refrigerants
- Ambient temperature TS min. /max.: -40°C / +60°C (The Max. T of HDF19, 25 and MDF25 is +55°C)
- Relative humidity: Less than 95%
- Installation position and direction: Vertical and horizontal are both ok, suction/ discharge port and liquid line

SHF-R Series

4 Way Reversing Valve

SHF-R series four-way reversing valve can withstand high temperature up to 150 ° C, suitable for high temperature Heat pump system to realize switching between cooling mode and heating mode by changing the flow path of refrigerant.

FEATURES

- High temperature resistance, suitable for high temperature heat pump systems
- Wide application range, suitable for nominal capacity from 20.4 to 81.6kW (@ R515B)

GENERAL SPECIFICATIONS

- Applicable refrigerants: R515B, R245fa, R1233zd (E), R134a, R123, R32 and other HCFC, HFC, HC, HFO refrigerants
- Applicable medium temperature: -30 °C ~+150 °C
- Max working pressure: 4.3MPa
- Certification: UL & CUL, VDE, CQC, compliant with LVD or PED directives

Note: 1. ΔP represents the pressure drop from $\emptyset C$ to $\emptyset S$ or from $\emptyset E$ to $\emptyset S$;

2. The selection capacity of the four-way valve for R32 systems should be $\geq 60\%$. It is not recommended to use the four-way valve in systems with a capacity less than 60% of the nominal capacity. When used in R32 systems, it is essential to ensure the reliability of low-pressure commutation under extreme conditions.

额定工况	High temperature drying	High temperature hot water	High temperature vapor

Subcooling Δt_{sr} (K)	15	15	15

EBV Series

Electric Ball Valve

EBV electric ball valve can adjust the refrigerant flow and cut off the refrigerant passage according to the system operating conditions, and is suitable for occasions with requirements such as flow resistance, liquid hammer, opening and closing noise and energy consumption. It can replace the pressure regulating valve, electronic expansion valve and solenoid valve at the same time, and play the role of pressure regulation and refrigerant on-off. In the R32 system, it can be used as a safety valve to immediately cut off the system circuit once a refrigerant leak is detected.

FEATURES

SOLENOID VALVE FUNCTION:

- Bidirectional on-off control
- Slowly open and close, avoid water hammer and fluid impact noise
- Energy-saving, only energy consumption during the operation process
- Full-port ball valve core, large flow, low pressure loss

FLOW REGULATE FUNCTION:

- Full open flow is large, pressure loss is small
- High precision in small flow regulation
- Low internal leakage, fully closed can be used as a shut-off valve

GENERAL SPECIFICATIONS

- Applicable for all common HCFC, HFC refrigerants such as: R134a, R404A, R407C, R410A, R32, R454B etc.
- Medium temperature TS min. /max.: -40°C ~+120°C
- Ambient temperature min. /max.: -30°C ~+70°C
- Relative humidity: Below 100% RH
- Full stroke: EBV05/EBV07 2800 steps
EBV05/EBV09 (External Coil) 4000steps
EBV09 (Built-in Motor) 3500steps
- Installation position:
 - Coil installed in the upwards position, valve body central axis within $\pm 15^\circ$ versus vertical axis

EBV Series

Electric Ball Valve

ELECTRICAL PARAMETERS

- Actuating mode: EBV03/EBV05/EBV07/EBV09 (External Coil) 2-2 Phase excitation, unipolar and bipolar actuation are optional
EBV09 (Built-in Motor) bipolar actuation
- Excitation rate: EBV03/EBV09 (Built-in Motor) 200pps
EBV05 200pps
EBV07/EBV09 (External Coil) 100pps
- End excitation mode holding 0.1~1.0 sec
- Insulation class of coil: E
- Protection class: IP67

EBV Series

Three Way Electric Ball Valve

The EBV refrigerant three-way electric ball valve can be used in commercial air conditioning systems for heat recovery, constant temperature dehumidification, and other occasions, achieving refrigerant on-off and flow regulation for the A and B outlet paths.

FEATURES

- FULL STAINLESS STEEL VALVE BODY DESIGN, HIGH STRENGTH, CORROSION RESISTANT
- PRECISE FLOW DISTRIBUTION ADJUSTMENT, MINIMAL FLOW FLUCTUATION
- COMPACT DESIGN, REQUIRING MINIMAL INSTALLATION SPACE
- LIGHTWEIGHT DESIGN, GOOD VIBRATION RESISTANCE
- HIGH OPERATING LIFE

GENERAL SPECIFICATIONS

- Applicable for all common HCFC, HFC refrigerants such as: R410A, R32, R134a, R404A, R407C, etc.
- Medium temperature TS min. /max: -40°C ~+120°C
- Ambient temperature: -30°C ~+60°C
- Relative humidity: below 100% RH

ELECTRICAL PARAMETERS

- Rated voltage: 12V DC
- Motor resistance: 52Ω/46Ω
- Full stroke: 3800 steps/4400 steps
- Actuating mode: 2-2 Phase excitation, unipolar and bipolar actuation are optional
- Excitation rate: 100pps
- End excitation mode holding 0.1-1.0s
- Protection class: IP67

TRAFFIC CHARACTERISTICS

BPHE Series

Brazed Plate Heat Hxchanger

SANHUA plate heat exchanger can be applied to high temperature heat pump in high temperature hot water system condenser. The plate adopts an optimized shallow fishbone design, which has strong reliability, high heat transfer efficiency and reduced pressure. SANHUA stainless steel plate heat exchanger is aimed at the global market and has obtained the European Union PED Class III certification. It is suitable for Class 1 and Class 2 fluids, including water, ethylene glycol solution, various HCFC, HFC, HC and HFO refrigerants, such as R515B, R245fa, R1233zd (E), R1343, R123, R32, etc. The maximum working pressure reaches 4.9 MPa and the maximum working temperature reaches 200°C .

FEATURES

- Compact structure
- Good reliability
- High heat exchange efficiency
- Low pressure drop

GENERAL SPECIFICATIONS

- Applicable refrigerants: R515B, R245fa, R1233zd (E), R1343, R123, R32, etc
- Operating temperature: -196 °C~ + 200°C

Note: 1)For S6B, it is the evaporation side and the supercooled side.

YCQB Series

Pressure Transducer

Pressure transducer are widely used in high temperature heat pump systems. Using a 5 V excitation input these sensors provide a 0.5-3.5 V or 0.5-4.5 V ratiometric signal output proportional to the pressure of the medium. This device requires no end user amplification. Pressure transducers permit to control and guarantee the system working under safe and stability condition.

FEATURES

- Overall features: applied high performance digital circuit which has good linear, small temperature excursion and high level of accuracy over wide operating range
- Small size and simple installation; models available with lead wire direct connector or with packard and molex socket connections;
- Stability: applied superior pressure core, good stability under strict process control;
- Diversification: different pressure ranges and different level of accuracy.

GENERAL SPECIFICATION

- Applicable for all common HCFC, HFC and HFO refrigerants such as: R22, R134a, R404A, R407C, R410A, R507, R1233zd (E), R1234yf ect.
- Medium temperature: -30 °C ~+40 °C ($\pm 0.8\%$ FS accuracy)
-30 °C ~+120 °C ($\pm 2\%$ FS accuracy)
-30 °C ~+150 °C ($\pm 2.5\%$ FS accuracy)
- Ambient temperature: -30 °C ~+80 °C
- Installation position: preferably with vertical axis and sensor upwards
- Certifications: UL, VDE, CE

ELECTRICAL SPECIFICATION

- Supply Voltage: 5V \pm 0.25V DC
- Current Consumption: Max. 10 mA
- Response Time: 10 ms
- Electrical strength: Max. 0.75 mA, AC 1.8KV (1s)
- Insulation Resistance: Min. 100 M Ω
- Load Resistance: Min. 10 k Ω
- Protection Class: IP67 (Lead wires type), IP66

DTGB Series

Liquid Line Filter Driers

DTGB series liquid line filter driers are used in Uni-flow refrigeration system line to absorb moisture and acidic harmful substances in the refrigeration system and filter impurities in the system.

FEATURES

- Combination of drying and filtering
- High efficient in moisture absorption, filtering impurity, acid, paint remains and mud removal
- Durable and solid filter cores
- Filtering fineness: 20µm
- Corrosion resistant painting survives salt spray test of 500 hours
- Connection type: flare or solder

GENERAL SPECIFICATIONS

- Applicable for all common HCFC, HFC, HC refrigerants, such as R515B, R245fa, R134a, R123, R32 ect.
- Medium temperature TS min. /max.: -30°C / +120°C
- Ambient temperature min. /max.: -30°C / +70°C
- Max. operating pressure PS max.: 4.8MPa (48bar)
- Installation position: Flow direction corresponds to the arrow, preferably installed in liquid line
- Certifications: UL, CUL and PED declaration

PSQ Series Ejector

PSQ series Ejector, used in full-liquid evaporators to eject oil back, increase fluid pressure, and recover low-pressure fluids.

FEATURES

- All-metal design, good strength
- High temperature resistance over 150 °C
- Threaded joint design for easy connection

GENERAL SPECIFICATIONS

- Applicable refrigerants: HFC, HFO and HC refrigerants, such as R515B, R245fa, R1233zd (E) , R134a, R123, R32, etc
- Applicable medium temperature: -40 °C ~ + 150 °C
- Max. working pressure: 4.2MPa
- Connection: All of the threads are 5/8-18 UNF

DIMENSIONS

Ejector Series	Dimensions [mm]				Connection		
	D	E	F	G	H	I	J
PSQ-2A01	106.7	48.4	61.3	24*24	5/8-18 UNF	5/8-18 UNF	5/8-18 UNF

PSV15 Series

Pressure Switch

PSV series pressure switch can be used in refrigeration, air conditioning and high temperature heat pump system to protect the systems from extremely low suction pressure or extremely high discharge pressure. The pressure switches also can be used to start or stop the refrigeration compressors and air-cooled condenser fans, to regulate other components in the systems which require pressure control function.

FEATURES

- High level of accuracy and high stability
- Long lifetime with both excellent electric and mechanical reliability
- SPDT switch to ensure good contact and disconnect conversion with fast reactions
- Various pressure ranges are available
- Supply with installation plate
- Bellows elements are made of tin bronze and pressure connections are made of brass

GENERAL SPECIFICATIONS

- Applicable refrigerants: R515B, R245fa, R1233zd (E) and other HCFC, HFC, HC, HFO refrigerants
- Medium temperature: $-40^{\circ}\text{C} / +150^{\circ}\text{C}$
- Ambient temperature: $-30^{\circ}\text{C} / +65^{\circ}\text{C}$
- Max. working pressure: HP: 3.5/4.5Mpa; LP: 1.65Mpa
- Waterproofing grade: IP30/IP44 (to be customized)
- Certifications: CE, PEV IV and UL listed
- Contact load:

Dual	PSV15	-0.5 ~ 7	0.7 ~ 5	6 ~ 32	5 fixed	Auto	Manual	Yes	PSV15AML-S01

Note: Based on the certified by TÜV, Rheinland acc. to PED 2014 68/EU, EN12263 are designed with double bellows at high pressure and they provide fail-safe function (models without PED 2014 68/EU Certificate can be used as pressure regulation devices, usage as pressure safety devices must be verified as per local legislation in the country of use). Regarding availability of PED 2014 68/EU (Category IV) Certificate please contact your Sanhua sales representative.

The double bellows system prevents loss of charge in the event of the inner bellow rupture. A rupture in the inner bellow will cause the control cut-out pressure to fall about 3 times less the set value and the compressor will stop. A rupture in the outer bellows will cause the control cut-out pressure to fall to about 3 bar under the set value and providing the so-called 'fail-safe' function.
